

# Style BWFP

## Boiler Water Feed Pump Packing

**SEPCO Style BWFP**  
**Versatile graphite material**  
**Temperatures up to 1200 degrees F**  
**Speeds up to 4000 fpm**  
**Made for demanding applications**

### **SEPCO Style BWFP: Boiler Water Feed Pump Packing Sets**

SEPCO introduces the best way to seal one of the most difficult applications: boiler water feed pumps. SEPCO's multi-ring packing set is all you need to solve your boiler packing problems. Sealing boiler water can be an extremely difficult task. The high temperatures quickly wear out packing lubrications, and the high speeds generate temperatures that simply destroy most packings. When this happens, re-packing is time consuming and costly. So SEPCO has developed the Boiler Water Feed Pump Packing Set:

**Flexible graphite rings**  
**Special end rings tailed to your application**

Each BWFP set includes flexible graphite die-formed rings and end rings. Graphite has so many advantages over conventional packing rings:

**Self-lubricating**  
**Conducts heat through the packing so it runs cooler and longer**  
**No resins or binders to cook out or become brittle**  
**No repacking - simply add a ring when you need it**

We design your end rings to meet the specifications of your particular application, using the materials that are most effective. Braided carbon, lead or metal are all available, as well as other materials.

**Ref. BWFP-12/99**

**Certified to ISO 9001: 2000 Standards.**
